ATOM

Instant messaging platform
that puts
SECURITY and
PRIVACY
first

Atom is a **decentralized Communication Platform** in which each node of the network is an isolated instance active on a single micro-server that is physically delivered to companies or individuals willing to use the service.

ZERO-KNOWLEDGE ANONYMOUS MESSAGING APP

No names, phone numbers nor email addresses.

Communicate securely online without leaving any personal trace.

Own your data

Host it yourself, instead of being forced to use the app's own server.

End-to-end encrypted by default

Other than the intended recipient, no one can read messages.

Keep your mobile number private

Private by Design: No phone number nor email address required.

Decentralized architecture

Decentralisation enables data sovereignty, data ownership and control.

No Local Data

The application does not keep the messages nor files exchanged.

No use of user data for advertising purposes

User data are not used for target advertising purposea.
